CONFLICT

Identifying the fundamental causes of Attrition and examining their relational dynamics to propose solutions.

CONFLICT

The company has experienced an attrition rate of 19%, which raises concerns about employee retention. This initial analysis provides a high-level overview of the extent of turnover across the organization. By understanding how many employees left versus stayed, we can begin to explore the underlying factors contributing to attrition.

Early trends suggest that younger employees, particularly those in the 20-30 age range, are leaving at a higher rate, which could indicate challenges related to engagement or career growth.

Attrition by Job Satisfaction and Work-Life Balance and salary

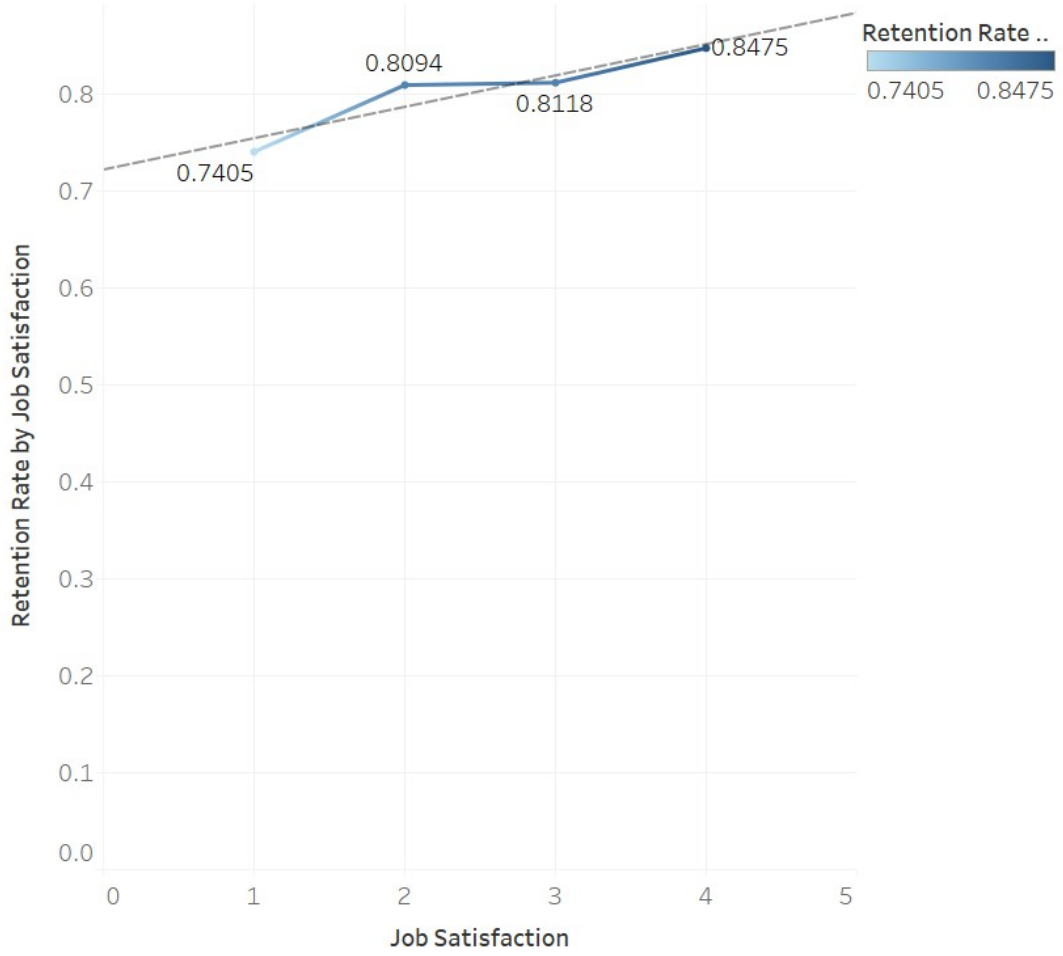

RESOLUTION

The solution proposition.

Resolution

Retention initiatives can be formulated by analysing their correlation with various variables. Initially, we will examine the correlation between retention and job satisfaction. The graph indicates a consistent increase in retention along with increasing job satisfaction. By increasing job satisfaction we can reduce attrition

Worklife balance is a pivotal factor in enhancing retention. The employees with more worklife balance are showing less chances of turnover.

Attrition can adversely affect a company by escalating expenses, depleting expertise, and diminishing morale; however, strong retention strategies, including competitive benefits, employee involvement, and the resolution of workplace issues, can mitigate its effects. By emphasising retention, organisations may sustain stability, retain talent, and promote long-term growth. This study enables the organisation to identify the causes and address them with targeted solutions.
